Dakson Chaves Cruz

Software Engineer: Backend, Fullstack & AI

Florianópolis, SC, Brazil. Open to international and remote roles.

I have been building backend and fullstack software since 2022: APIs, business rules, integrations, tests, monitoring, security, performance and production deploys. Today I also work on software architecture and on products powered by generative AI.

Postgraduate degree in Software Engineering (USP/ESALQ) and a bachelor's in Information Technology (Univesp).

skills // tech stack

- **Languages:** JavaScript, TypeScript, Python, Go, PHP
- **Backend & APIs:** Node.js, NestJS, FastAPI, Django REST Framework, REST APIs, GraphQL, business rules
- **Frontend:** React, Next.js
- **AI:** LLMs, NLP, RAG, LangChain, LangGraph, Transformers, machine learning, deep learning, fine-tuning
- **Data & messaging:** MongoDB, SQL Server, Redis, Kafka, RabbitMQ
- **Infrastructure & observability:** Docker, Kubernetes, OpenTofu, Keycloak, New Relic, CloudWatch
- **Practices:** software architecture, distributed systems, unit testing, monitoring, security, debugging, API documentation, agile

experience // context, action, result

Software Developer at Saipos

Jan 2026 to present · São Leopoldo, Brazil

Context

Saipos builds a management system for restaurants, running as a distributed application that keeps growing.

Action

I build new features and fix production issues with unit tests and monitoring, take part in architecture decisions to keep the platform distributed, flexible and scalable, help define technical solutions for projects and follow production deploys.

Result

Features shipped to production with tests and monitoring in place, and a voice in how the architecture evolves.

Backend Developer at Delivery Much

Jul 2024 to Jan 2026 · Florianópolis, Brazil

Context

Delivery Much is a food delivery platform in Brazil, where APIs handle orders and sensitive customer data.

Action

I built and maintained robust, scalable APIs, implemented business rules from product requirements, applied security measures to protect sensitive data and worked on testing, debugging, bug fixing and performance.

Result

More robust APIs, better protection of sensitive data, and input into technical decisions and product evolution.

Trainee to Backend Developer at Dataside

Mar 2022 to Jul 2024 · São José dos Campos, Brazil

- **Backend Developer** (Oct 2023 to Jul 2024): APIs, business logic and server infrastructure; database design and tuning; authentication and security; API documentation and server performance.
- **Frontend Developer** (Mar 2023 to Oct 2023): responsive React components, state management, stability tests and accessibility, working closely with designers.
- **Frontend Developer Trainee** (Mar 2022 to Mar 2023): web application development and fast technical growth.

Result

Three roles in just over two years, growing from frontend trainee to backend developer.

teamwork // multidisciplinary teams

- **Product:** turning product requirements into business rules and APIs, and helping shape the technical solution before coding starts.
- **Design:** building accessible, responsive interfaces together with designers.
- **Engineering:** taking part in architecture decisions, following deploys and spreading agile practices across the team.

education // degrees and courses

- **Postgraduate degree in Software Engineering**, USP/ESALQ (May 2024 to May 2026)
- **Bachelor's degree in Information Technology**, Univesp (Aug 2021 to Aug 2024)
- **AI Engineering**, Alura, 222 hours (2026)
- **AI Solutions Architecture**, Alura, 162 hours
- **English**, Wise Up (in progress)

Languages

- Portuguese: native
- English: intermediate (technical)
